Collected: 03/17/2020 09:37 Received: 03/17/2020 09:37

Serum Integrated Screen Part 2 (No NT)

Test Name	Result	Flag	Ref-Ranges	Units	Site
Screen Result	Negative		Negative		WMRL
Age at EDD (years)	27				WMRL
1st Sample Date	2/24/20				WMRL
GA (weeks)	12				WMRL
GA (days)	0				WMRL
2nd Sample Date	3/24/20				WMRL
GA (weeks)	16				WMRL
GA (days)	1				WMRL
Weight (lbs)	170				WMRL
Multiple Gestation	Single				WMRL
Ethnic Origin	White				WMRL
IDDM	None				WMRL
Smoker	No				WMRL
AFP	32.6			ng/mL	WMRL
uE3	1.30			ng/mL	WMRL
hCG	18.6			IU/mL	WMRL
Inhibin-A	80.0			pg/mL	WMRL
PAPP-A	984.0			ng/mL	WMRL
AFP MOM	1.06				WMRL
UE3 MOM	1.47				WMRL
HCG MOM	0.55				WMRL
INH MOM	0.55				WMRL
PAPP-A MOM	0.97				WMRL
Down Syndrome Risk	1:40000				WMRL
Maternal Age Risk for Down	1:930				WMRL
Trisomy 18 Risk	1:40000				WMRL
GA Method	US				WMRL

The gestational age is based on an ultrasound dating of 12 weeks 0 days on 02/24/20.

Interpretation	SeeBelow				WMRL

This is the initial sample received at Warde Laboratory for Integrated Screening Part Two.

SCREEN NEGATIVE FOR DOWN SYNDROME, NEURAL TUBE DEFECTS

LABORATORY REPORT

Test Name	Result	Flag	Ref-Ranges	Units	Site
AND TRISOMY 18.					

Additional Test Information:
The Serum Integrated Screen Part Two provides risk estimates, not a diagnosis. Incorrect or missing information may considerably alter results.

A positive report is indicated when the Down syndrome risk is greater than or equal to 1:270, the risk for Trisomy 18 is greater than or equal to 1:100, or when the AFP MOM is greater than or equal to 2.20.

Risks in twins cannot be precisely estimated because the relative contribution of each twin to serum marker levels cannot be determined.
Maternal weights less than 90 lbs or greater than 280 lbs are truncated and risks are estimated.
Assessment is adjusted for donor eggs, insulin-dependent diabetic status, weight, race and smoking.
Previous pregnancies affected with a neural tube defect or Down syndrome may significantly affect current results.

The PAPP-A test uses a kit designated by the manufacturer as "for research use, not for clinical use". The performance characteristics of this test were validated by Warde Medical Laboratory. The U.S. Food and Drug Administration(FDA) has not approved or cleared this test. The results are not intended to be used as the sole means for clinical diagnosis or patient management decisions. Warde Medical Laboratory is authorized under Clinical Laboratory Improvement Amendments (CLIA) to perform high-complexity testing.

Performing Site:
WMRL: Warde Medical Laboratory 300 West Textile Road Ann Arbor MI 48108 (800)876-6522
