Referral Testing

Collected: 09/25/2023 11:13 Received: 09/25/2023 11:13

<u>Test Name</u>	<u>Result</u>	<u>Flag</u>	<u>Ref-Ranges</u>	<u>Units</u>	<u>Site</u>
D-dimer, Quantitative	0.27		<0.50	mcg/mL FEU	QCRL

The D-Dimer test is used frequently to exclude an acute PE or DVT. In patients with a low to moderate clinical risk assessment and a D-dimer result <0.50 mcg/mL, the likelihood of a PE or DVT is very low. However, a thromboembolic event should not be excluded solely on the basis of the D-Dimer level. Increased levels of D-Dimer are associated with a PE, DVT, DIC, malignancies, inflammation, sepsis, surgery, trauma, pregnancy, and advancing patient age. [JAMA 2006 11:295(2):199-207].
