Desmoglein 1 and Desmoglein 3

Desmoglein 1 >200 H <20 RU/mL MMRL

The Dsg1 and Dsg3 ELISA tests are intended for in vitro use as an aid in the diagnosis of pemphigus and related entities. Positive test results could be compatible with a diagnosis of pemphigus. However, final clinical diagnosis should be based on integration of clinical features and results of other supportive tests, such as histopathology on standard microscopy, perilesional biopsy for direct immunofluorescence (test code CIB), and indirect immunofluorescence on human salt-split skin and monkey esophagus substrates (test code CIFS).

Desmoglein 3 <2 <20 RU/mL MMRL

-----ADDITIONAL INFORMATION-----

Dsg1 and Dsg3 are intended for in vitro diagnostic use as an aid in the diagnosis of pemphigus and related entities, and should be interpreted in conjunction with other laboratory and clinical findings.

This test has been modified from the manufacturer's instructions. Its performance characteristics were determined by Mayo Clinic in a manner consistent with CLIA requirements. This test has not been cleared or approved by the U.S. Food and Drug Administration.

Test Performed by:

Mayo Clinic Laboratories - Rochester Main Campus 200 First Street SW, Rochester, MN 55905

Lab Director: William G. Morice M.D. Ph.D.; CLIA# 24D0404292

Performing Site:

MMRL: MAYO MEDICAL REFERENCE LAB 3050 Superior Drive NW Rochester MN 55901

Reported Date: 2023.09.25 11:50 DESMO

LAB: L - LOW, H - HIGH, AB - ABNORMAL, C - CRITICAL, . - NOT TESTED
