N-Desmethyflunitrazepam	<5		<5	ng/mL	QDRL
-------------------------	----	--	----	-------	------

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by the FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes. Reference range is equivalent to lower limit of detection for this assay. Flunitrazepam is typically ingested in small doses and is rapidly metabolized; hence it has a relatively short half-life in serum. Flunitrazepam metabolites may be detected in urine 5 days or more post ingestion, however, as small doses are typically ingested, detection in urine is typically limited to the first 24-72 hours. This panel includes Flunitrazepam, 7-Aminoflunitrazepam, and N-Desmethyflunitrazepam.

This drug testing is for medical treatment only. Analysis was performed as non-forensic testing and these results should be used only by healthcare providers to render diagnosis or treatment, or to monitor progress of medical conditions.
