Collected: 03/17/2020 08:25 Received: 03/17/2020 08:25

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Hepatitis B Virus DNA, Qualitative, Not detected, Not detected, WMRL

This procedure utilizes a real-time polymerase chain reaction test from Abbott Molecular. The amplification target is a conserved region in the terminal third of the hepatitis B surface antigen gene. The qualitative limit of detection is 10 IU/mL (1.00 Log IU/mL). A "Not detected" result does not rule out infection.
