Herpes Culture					
Specimen Source	Tissue				WMRL
HSVC Interpretation	No Growth		No Growth		WMRL

This method utilizes standard tube culture methods with monoclonal antibody staining of CPE-positive cells. This procedure can detect and differentiate herpes type 1 and herpes type 2. Other viruses present in the specimen will not be identified.

A negative result does not preclude viral infection. The viability of viral agents can be degraded if specimens are improperly collected or stored. The number of viable virus particles may be below the detection threshold.

Reported Date: 11/30/2023 14:45 HSVC

Performing Site:

WMRL: WARDE MEDICAL LABORATORY 300 West Textile Road Ann Arbor MI 48108
