Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Neutrophil Ab, Flow Cytometry, DETECTED, AB, , QCRL

Reference Range:
NONE DETECTED

The flow cytometric analysis of granulocyte antibodies is designed as a screening test to detect antibody reacting with random donor granulocytes. The assay will not distinguish antibodies directed against neutrophil specific antigens from those directed against HLA antigens. Differences in donor neutrophil antigen characteristics may result in some interassay variability.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics Nichols Institute San Juan Capistrano. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.

Test Performed at:
Quest Diagnostics Nichols Institute
33608 Ortega Highway
San Juan Capistrano, CA 92675-2042 I Maramica MD, PhD, MBA
