Molecular

Collected: 03/17/2020 08:36 Received: 03/17/2020 08:36

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Contains rows for BK Virus DNA PCR, Quantitative, Plasma with results like 'Not detected' and '<125'.

This test utilizes a polymerase chain reaction to amplify sequences from the VP1 regions of the BK virus genome. Real-time detection and quantification are used to determine the viral copy number. The analytical measurement range is 125 to 5 million copies/mL (2.10 to 6.70 log(10) copies/mL). The qualitative limit of detection is 100 copies/mL (1.78 log(10) copies/mL).

Specimens reported as "DETECTED" but <125 copies/mL contain detectable levels of BK virus DNA but the viral load is below the limit of quantitation. A "Not detected" result does not rule out infection.

This test uses commercial reagents that have not been approved or cleared by the FDA. The FDA has determined that such clearance or approval is not necessary. The performance characteristics of this procedure were determined by Warde Medical Laboratory.

This test is performed pursuant to a license agreement with Roche Molecular Systems, Inc.
