Paraneoplastic Interpretation, CSF

A negative basic paraneoplastic evaluation result does not rule out all clinically relevant antibodies. If indicated, a comprehensive neurological phenotype-specific autoimmune/paraneoplastic evaluation (e.g. encephalopathy, movement disorders, myelopathy, or axonal neuropathy) should be considered https://news.mayocliniclabs.com/autoimmune-neurology-evolution/. These evaluations include screening cell-based assays optimized for detection of recently discovered antibodies.

IFA Notes None.
