Collected: 03/17/2020 09:23 Received: 03/17/2020 09:23

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Rhinovirus PCR, Nasopharyngeal Swab, AB, Not detected, WMRL.

This test utilizes a real-time reverse-transcriptase polymerase chain reaction procedure to amplify and detect the 5'-nontranslated region of the rhinovirus genome. This procedure will detect all of the >200 rhinovirus types. This procedure cannot differentiate the individual rhinovirus types. The analytical sensitivity of this assay is 200 copies/mL. A "Not detected" result does not rule out infection.

This test uses commercial reagents that have not been approved or cleared by the FDA. The FDA has determined that such clearance or approval is not necessary. The performance characteristics of this procedure were determined by Warde Medical Laboratory.

This test is performed pursuant to a license agreement with Roche Molecular Systems, Inc.

Reported Date: 03/26/2020 10:22 RNPCR

Performing Site: WMRL: WARDE MEDICAL LABORATORY 300 West Textile Road Ann Arbor MI 48108
