## Referral Testing

Collected: 09/05/2023 10:41 Received: 09/05/2023 10:41

Test Name	Result	Flag	Ref-Ranges	Units	Site
RSV Antibody	1:8	H			QCRL

REFERENCE RANGE: <1:8

### INTERPRETIVE CRITERIA:

<1:8 Antibody Not Detected  
> or = 1:8 Antibody Detected

Single titers > or = 1:64 usually indicate recent RSV infection. A four-fold or greater increase in titer between acute and convalescent specimens is required for diagnosis of RSV infection in adults and children > 6 months of age. In contrast, only about 50% of infected children less than 6 months of age exhibit a four-fold or greater increase in titer. Viral isolation and RSV antigen detection methods are recommended for patients <6 months old.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.

Test Performed at:  
Quest Diagnostics Nichols Institute
