### SHORTBCSF

Source: Cerebrospinal Fluid

#### Flow Cytometry Interpretation:

In summary, there is no immunophenotypic evidence of B cell neoplasia in the cerebrospinal fluid.

#### Morphology:

The sample has very low cellularity. The Wright stained cytospin contains too few nucleated cells for morphologic evaluation.

#### Comment :

Immunophenotyping by flow cytometry reveals that B-lymphocytes are rare to absent in the sample. Therefore, there is no evidence of a clonal or immunophenotypically abnormal B-lymphocyte population in the sample by this analysis.
