Drug Screen, Serum Comprehensive

Table with 7 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Rows include Amphetamine, Barbiturate, Benzodiazepine, Cocaine, Methadone, Opiate, Phencyclidine, Propoxyphene, THC, and Ethanol.

Ethanol confirmation performed by FID. The ethanol confirmation decision limit is 10 mg/dL.

Screen Decision Limits

Table with 3 columns: Drug Analyzed, Screen, Units. Lists various drugs and their respective screen values and units.

A positive immunoassay result on a serum drug screen is considered presumptive evidence for the presence of the drug or its metabolite. Since some immunoassay tests detect only inactive metabolites and others are sensitive to very low drug levels, positive results may not correlate with the patient's physiological state.

For confirmation of positive immunoassay results by an alternate method or for consultation, please contact the laboratory.
