

## LABORATORY REPORT

Example Client, XYZ123  
1234 Warde Road  
Ann Arbor MI 48108

### EXAMPLE, REPORT

WX0000003827 M 07/08/1978

---

Collected: 12/28/2023 14:17

### SEZARY

Source: Peripheral blood

#### Flow Cytometry Interpretation:

The combined immuno-morphologic profile is fully consistent with a mature T non-Hodgkin lymphoma, and is fully consistent with Sezary syndrome.

#### Morphology:

The Wright stained blood smear reveals a mixture of lymphocytes, monocytes, and neutrophils. Slight significant increase in mature lymphocytes is seen, and there are no blasts identified.

#### Comment :

The bright CD45 positive cells with lymphoid light scatter are analyzed. These cells are predominantly atypical T lymphocytes, comprising 85% of the lymphocyte population. The composite antigen profile for the abnormal T cells is: CD4+, CD7 neg, CD26 neg, CD3+, CD8 neg. The CD4/CD8 ratio is 11.8:1.

#### Reviewed by:

Kajal V. Sitwala, MD, PhD

12/28/2023 14:26

#### Antibodies performed:

CD3, CD4, CD7, CD8, CD26, CD45

This test was developed and its performance characteristics determined by Warde Medical Laboratory. It has not been cleared or approved by the U.S. Food and Drug Administration. The FDA has determined that such clearance or approval is not necessary.
