Methadone, Serum, Qualitative

<u>Test Name</u>	<u>Result</u>	<u>Flag</u>	<u>Ref-Ranges</u>	<u>Units</u>	<u>Site</u>
Methadone, Serum, Qualitative	Positive				WMRL

Screen Decision Limits

<u>Drug Analyzed</u>	<u>Screen</u>	<u>Units</u>
Methadone	150	ng/mL

A positive immunoassay result on a serum drug screen is considered presumptive evidence for the presence of the drug or its metabolite. Since some immunoassay tests detect only inactive metabolites and others are sensitive to very low drug levels, positive results may not correlate with the patient's physiological state.

For confirmation of positive immunoassay results by an alternate method or for consultation, please contact the laboratory.

If applicable, any drug confirmation testing reported here was developed and the performance characteristics determined by Warde Medical Laboratory. This confirmation testing has not been cleared or approved by the FDA. The laboratory is regulated under CLIA as qualified to perform high-complexity testing. This test is used for patient testing purposes. It should not be regarded as investigational or for research.

Performing Site:

WMRL: Warde Medical Laboratory 300 West Textile Road Ann Arbor MI 48108 (800)876-6522
