## Referral Testing

Collected: 08/30/2023 08:43 Received: 08/30/2023 08:43

Test Name	Result	Flag	Ref-Ranges	Units	Site
<b>Striated Muscle Antibodies, IgG Screen</b>					
Striated Muscle Antibodies, IgG	<1:40		<1:40		ARRL

Striated Muscle Antibodies, IgG are not detected. No further testing will be performed.  
INTERPRETIVE DATA: Striated Muscle Antibodies, IgG Screen

In the presence of acetylcholine receptor (AChR) antibody, striated muscle antibodies, which bind in a cross-striational pattern to skeletal and heart muscle tissue sections, are associated with late-onset myasthenia gravis (MG). Striated muscle antibodies recognize epitopes on three major muscle proteins, including: titin, ryanodine receptor (RyR) and Kv1.4 (an alpha subunit of voltage-gated potassium channel [VGKC]). Isolated cases of striated muscle antibodies may be seen in patients with certain autoimmune diseases, rheumatic fever, myocardial infarction, and following some cardiotomy procedures.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.
