Referral Testing

Collected: 08/28/2023 15:37 Received: 08/28/2023 15:37

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Titanium, Blood, 2.0, mcg/L, NMRL

Reporting Limit: 1.0 mcg/L
The normal value for titanium is generally less than 5 mcg/L. In patients with a titanium-based implant/prosthesis, a blood concentration greater than 10 mcg/L may be indicative of wear. However, a reported titanium value alone is not predictive of prosthesis wear or failure.
Analysis by Inductively Coupled Plasma/Mass Spectrometry (ICP/MS)
Specimens for elemental testing should be collected in certified metal-free containers. Elevated results for elemental testing may be caused by environmental contamination at the time of specimen collection and should be interpreted accordingly. It is recommended that unexpected elevated results be verified by testing another specimen in a trace metal free container.
This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.

Testing performed at NMS Labs, Inc.
200 Welsh Road
Horsham, PA 19044-2208
