Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Trichinella IgG Antibody, NEGATIVE, QCR

REFERENCE RANGE: NEGATIVE

The Trichinella IgG ELISA employs an excretory-secretory antigen to reduce nonspecific reactivity; however, crossreactivity with other parasite antigens (e.g., strongyloides, filarial, malaria) may occur. The assay should be considered a screening test for Trichinella exposure; diagnosis of trichinosis requires a compatible patient history and supporting pathologic findings.
