Result Test

Wild Type Mass 13760.5 Da

Wild Type Width at

Half Height 3.1 Da Abnormal result No

Interpretation

In this sample no alteration was observed by mass spectrometry (MS). If there is strong clinical suspicion or if there is a positive family history, molecular sequencing (MML test ATTRZ/TTR Gene, Full Gene Analysis) is recommended to rule out the possibility of a false-negative result. This could be done on the existing sample if requested within two months of sample collection. If you would like to request follow-up testing, please call 1-800-533-1710 (Mayo Clinic physicians, call 6-1800). If you have questions about this result, the biochemical genetics consultant on-call can be reached at the same number.

ADDITIONAL INFORMATION

Affinity Chromatography-Mass Spectrometry (MS)
