BK Virus DNA, Qualitative, Urine	Not detected		Not detected		WMRL

This test utilizes the polymerase chain reaction to amplify sequences from the VP1 region of the BK virus genome. The qualitative limit of detection is 100 copies/mL 2.00 log(10) copies/mL) A "Not detected" result does not rule out infection.

This test uses commercial reagents that have not been approved or cleared by the FDA. The FDA has determined that such clearance or approval is not necessary. The performance characteristics of this procedure were determined by Warde Medical Laboratory.

This test is performed pursuant to a license agreement with Roche Molecular Systems, Inc.
