Referral Testing

Collected: 09/22/2023 14:25 Received: 09/22/2023 14:25

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Includes rows for Creatinine, Urine - per 24h and Hours Collected.

Per 24h calculations are provided to aid interpretation for collections with a duration of 24 hours and an average daily urine volume. For specimens with notable deviations in collection time or volume, ratios of analytes to a corresponding urine creatinine concentration may assist in result interpretation.

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Includes rows for Creatinine, Urine - per volume and Lead, Urine - ratio to CRT.

Unable to accurately calculate the creatinine normalized result due to a low per volume result.

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Includes rows for Lead, Urine - per 24h and Lead, Urine - per volume.

INTERPRETIVE INFORMATION: Lead, Urine

Quantification of urine excretion rates before or after chelation therapy has been used as an indicator of lead exposure. Urinary excretion of >125 mg of lead per 24 hours is usually associated with related evidence of lead toxicity.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Includes row for Total Volume.
