Received: 12/01/2023 15:49

<u>Test Name</u>	<u>Result</u>	<u>Flag</u>	<u>Ref-Ranges</u>	<u>Units</u>	<u>Site</u>
West Nile Virus Ab, IgG IgG NEGATIVE.	0.50		<1.30	Index	WMRL

An index value of <1.30 indicates IgG antibodies to West Nile virus were not detected. The absence of IgG antibodies is presumptive evidence that the patient was not infected with West Nile virus or another flavivirus. However, the sample may have been drawn before antibodies were detectable, or the patient may be immunosuppressed. If infection is suspected, another sample should be drawn 7 - 14 days later and tested. Refer to the CDC guidelines for diagnosis of West Nile encephalitis.

Performing Site:

WMRL: Warde Medical Laboratory 300 West Textile Road Ann Arbor MI 48108 (800)876-6522
