Received: 12/01/2023 15:44

<u>Test Name</u>	<u>Result</u>	<u>Flag</u>	<u>Ref-Ranges</u>	<u>Units</u>	<u>Site</u>
West Nile Virus Ab, IgM IgM NEGATIVE.	0.50		<0.90	Index	WMRL

An index value of <0.90 indicates IgM antibodies to West Nile virus were not detected. The absence of IgM antibodies is presumptive evidence that the patient was not recently infected with West Nile virus or another flavivirus. However, the sample may have been drawn before antibodies were detectable, or the patient may be immunosuppressed. If infection is suspected, then another sample should be drawn 7 to 14 days later and tested. Refer to CDC guidelines for diagnosis of West Nile encephalitis.

Performing Site:

WMRL: Warde Medical Laboratory 300 West Textile Road Ann Arbor MI 48108 (800)876-6522
