Estradiol	58	H	<33	pg/mL	WMRL

Testing was performed using the Beckman Access DXI immunoassay and should not be used to monitor the effectiveness of estradiol supplements. Estradiol supplements may elevate estrone and estrone-3-sulfate concentrations, which can interfere with this assay causing a negative or positive bias in the reported estradiol concentration. For patients being treated with estradiol supplements, an alternative method such as LC/MS should be used.
