Referral Testing

Collected: 09/26/2023 13:29 Received: 09/26/2023 13:29

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Rows include Histoplasma Yeast Antibodies and Histoplasma Mycelial Antibodies.

REFERENCE RANGE: <1:8

INTERPRETIVE CRITERIA:

<1:8 Antibody Not Detected
> or = 1:8 Antibody Detected

Complement-fixation (CF) titers greater than or equal to 1:8 are generally considered evidence indicative of histoplasmosis. Higher titers increase the probability of infection. However, positive titers are also seen with fungal infections other than histoplasmosis, and confirmation of antibody specificity with immunodiffusion procedures is recommended. Changing titers are useful both in diagnosis and in assessment of treatment efficacy.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.

Test Performed at:
Quest Diagnostics Nichols Institute
33608 Ortega Highway
San Juan Capistrano, CA 92675-2042 I Maramica MD, PhD

Performing Site:
