Ara h 9 Class	CLASS 0				WMRL

Sensitization to Ara h 1, Ara h 2, Ara h 3, and Ara h 6 may indicate an increased risk of systemic allergic response upon exposure to peanut. Sensitization to Ara h 8 and Ara h 9 may be associated with cross-reactivity and sensitization to birch pollen and peaches and peach related fruits, respectively. Reactivity to whole peanut without reactivity to peanut components may indicate low to moderate sensitization to peanut. Results from peanut-specific IgE testing must be interpreted in the context of patient's clinical evaluation and history of allergen reactivity.

Allergy Interpretation See Below WMRL
