Referral Testing

Collected: 08/18/2023 09:09 Received: 08/18/2023 09:09

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Amoeba (E histolytica) Ab, IgG, 3, <=8, U, ARRL

INTERPRETIVE INFORMATION: E. Histolytica (Amebiasis) Ab

- 8 U or less Negative - No significant level of detectable E. histolytica IgG antibody.
9 - 11 U Equivocal - Repeat testing in 10-14 days may be helpful.
12 U or greater Positive - IgG antibody to E. histolytica detected, suggestive of a current or past infection.

Seroconversion between acute and convalescent sera is considered strong evidence of recent infection. The best evidence for infection is a significant change on two appropriately timed specimens where both tests are done in the same laboratory at the same time.
