Adenovirus PCR					
Specimen Source	Nasopharyngeal Swab				WMRL
Adenovirus	Not detected		Not detected		WMRL

This test utilizes a real-time polymerase chain reaction procedure to amplify and detect a 110 base pair region of the adenovirus hexon gene. This procedure will detect all known human adenoviruses but it cannot differentiate individual types. The analytical sensitivity of this assay is 200 copies/mL. A "Not detected" result does not rule out infection.

This test uses commercial reagents that have not been approved or cleared by the FDA. The FDA has determined that such clearance or approval is not necessary. The performance characteristics of this procedure were determined by Warde Medical Laboratory.

This test is performed pursuant to a license agreement with Roche Molecular Systems, Inc.
