Referral Testing

Collected: 09/05/2023 14:30 Received: 09/05/2023 14:30

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Coccidioides Ab by CF & ID, Serum; Coccidioides Immitis Abs, Preciptin; Not Detected; Not Detected; ARRL

No Coccidioides antibodies (ie, IDTP, IDCF) were detected. This result does not exclude Coccidioides infection.

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Coccidioides Antibody by CF; <1:2; <1:2; ARRL

INTERPRETIVE INFORMATION: Coccidioides Ab by Complement Fixation (CF)

Any titer suggests past or current infection. However, greater than 30 percent of cases with chronic residual pulmonary disease have negative Complement Fixation (CF) tests. Titers of less than 1:32 (even as low as 1:2) may indicate past infection or self-limited disease; anticoccidioidal CF antibody titers in excess of 1:16 may indicate disseminated infection. CF serology may be used to follow therapy. Antibody in CSF is considered diagnostic for coccidioidal meningitis, although 10 percent of patients with coccidioidal meningitis will not have antibody in CSF.

Performed By: ARUP Laboratories
500 Chipeta Way
Salt Lake City, UT 84108
Laboratory Director: Jonathan R. Genzen, MD, PhD
CLIA Number: 46D0523979
