Referral Testing

Collected: 07/26/2023 10:23 Received: 07/26/2023 10:23

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: ADAMTS 13 Activity with Reflex to Inhibitor, ADAMTS 13 Activity, 0.25, L, 0.68-1.63, IU/mL, QCRL

Activity levels below 0.10 IU/mL are seen in acquired and hereditary thrombotic thrombocytopenic purpura (TTP). Not all patients with TTP will exhibit low levels of ADAMTS13 activity with this assay, i.e., post bone marrow transplantation, drug-induced TTP, and mutations of ADAMTS13 at the CUB domain.

Recent plasma exchange or immunosuppressive therapy may raise the observed activity levels. Mild decreases in ADAMTS13 activity are seen in a wide variety of conditions including metastatic cancer, neonates, serious infections and cirrhosis of the liver.

This test was performed using a kit that has not been cleared or approved by the FDA. The analytical performance characteristics of this test have been determined by Quest Diagnostics Nichols Institute San Juan Capistrano. This test should not be used for diagnosis without confirmation by other medically established means.
