Final Report

Mycobacterium avium-intracellulare complex

Susceptibility Results

Organism: Mycobacterium avium-intracellulare complex

Table with 2 columns: Drug Name, Interpretation/MIC. Rows include Amikacin, Clarithromycin, Linezolid, Moxifloxacin with their respective MIC values and interpretations.

Interpretive Information Interpretation: SEE NOTE

For Mycobacterium avium-intracellulare complex, CLSI recommends testing and reporting clarithromycin, moxifloxacin, amikacin and linezolid. The reported amikacin interpretation is for IV; if using amikacin (liposomal, inhaled), the MIC interpretive breakpoints are <=64 ug/mL Susceptible, >=128 ug/mL Resistant. The in vivo effectiveness of Moxifloxacin and Linezolid for MAC disease is unproven. Ethambutol, rifampin and rifabutin MIC results are not reported because MIC values are not predictive of clinical responses and may be misleading.

Susceptibility performed by a non-standardized methodology. Interpret results in conjunction with clinical presentation. Test developed and characteristics determined by ARUP Laboratories. See compliance Statement B: aruplab.com/CS.
