Interpretation SeeBelow WMRL

This is the initial sample received at Warde Laboratory for MSAFP

SCREEN NEGATIVE FOR NEURAL TUBE DEFECTS.

Additional Test Information:

The MSAFP does not provide a risk estimate or a diagnosis. Incorrect or missing information may considerably alter results.

A positive report is indicated when the AFP MOM is greater than or equal to 2.20.

Maternal weights less than 65 lbs or greater than 440 lbs are truncated and the AFP MOM is not adjusted beyond those limits.

Assessment is adjusted for insulin-dependent diabetic status, weight, race and smoking.

Previous pregnancies affected with a neural tube defect may significantly affect results.
