## Referral Testing

Collected: 09/25/2023 14:20 Received: 09/25/2023 14:20

<u>Test Name</u>	<u>Result</u>	<u>Flag</u>	<u>Ref-Ranges</u>	<u>Units</u>	<u>Site</u>
<b>Influenza Type A and B Antibodies, Serum</b>					
Influenza A Ab	<1:8				QCRL
Influenza B Ab	<1:8				QCRL

REFERENCE RANGE: <1:8

INTERPRETIVE CRITERIA:

<1:8 Antibody Not Detected  
> or = 1:8 Antibody Detected

Single titers of > or = 1:64 are indicative of recent infection. Titers of 1:8 to 1:32 may be indicative of either past or recent infection, since CF antibody levels persist for only a few months. A four-fold or greater increase in titer between acute and convalescent specimens confirms the diagnosis.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.

Test Performed at:  
Quest Diagnostics Nichols Institute  
33608 Ortega Highway  
San Juan Capistrano, CA 92675-2042 I Maramica MD, PhD
