Referral Testing

Collected: 08/25/2023 11:55 Received: 08/25/2023 11:55

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Bartonella quintana IgG IgM AB, Bartonella quintana IgG Abs, <1:64, ARRL

INTERPRETIVE INFORMATION: Bartonella quintana Antibody, IgG

- Less than 1:64 Negative: No significant level of Bartonella quintana IgG antibody detected.
1:64 - 1:128 Equivocal: Questionable presence of Bartonella quintana IgG antibody detected. Repeat testing in 10-14 days may be helpful.
1:256 or greater Positive: Presence of IgG antibody to Bartonella quintana detected, suggestive of current or past infection.

A low positive suggests past exposure or infection, while high positive results may indicate recent or current infection, but is inconclusive for diagnosis. Seroconversion between acute and convalescent sera is considered strong evidence of recent infection. The best evidence for infection is a significant change on two appropriately timed specimens where both tests are done in the same laboratory at the same time.

This test was developed and its performance characteristics determined by ARUP Laboratories. It has not been cleared or approved by the US Food and Drug Administration. This test was performed in a CLIA certified laboratory and is intended for clinical purposes.

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Bartonella quintana IgM Abs, <1:16, ARRL

INTERPRETIVE INFORMATION: Bartonella quintana Ab, IgM

- Less than 1:16 Negative-No significant level of Bartonella quintana IgM antibody detected.
1:16 or greater Positive-Presence of IgM antibody to Bartonella quintana detected, suggestive of current or recent infection.

The presence of IgM antibodies suggests recent infection.

LAB: L - LOW, H - HIGH, AB - ABNORMAL, C - CRITICAL, . - NOT TESTED
