Immunochemistry

Collected: 03/17/2020 08:29 Received: 03/17/2020 08:29

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Rows include Hepatitis C Antibody, Hepatitis C Virus RNA Qualitative, Hepatitis C Virus RNA, Quantitative, Log Hepatitis C Virus RNA, and HCV Interpretation.

The HCV RNA PCR procedure utilizes a real-time polymerase chain reaction test from Abbott Molecular. The amplification target is a conserved region of the HCV genome. The lower limit of quantitation is 12 IU/mL (1.08 Log IU/mL) and the upper limit of quantitation is 100 million IU/mL (8.00 Log IU/mL). The qualitative limit of detection is 12IU/mL (1.08 Log IU/mL).

Specimens reported as DETECTED but <12 IU/mL contain hepatitis C RNA but the viral load is below the limit of quantitation.

Reported Date: 03/18/2020 14:42 HCVR

Performing Site:

WMRL: WARDE MEDICAL LABORATORY 300 West Textile Road Ann Arbor MI 48108
