Zika Virus IgM Antibody Capture (MAC), by ELISA	Negative		Negative		ARRL

INTERPRETIVE INFORMATION: Zika Virus IgM Ab Capture (MAC), ELISA

The possibility of false-positive or false-negative results must be considered. RT-PCR testing on both a serum and urine specimen is recommended by the Centers for Disease Control and Prevention (CDC) to rule out false-negative IgM results in patients experiencing symptoms for less than 2 weeks. Specimens collected for IgM testing greater than or equal to 2 weeks after symptom onset do not require any additional testing. For more information, please review the current clinical guidelines for Zika virus testing at: [www.cdc.gov/zika/](http://www.cdc.gov/zika/)
