Referral Testing

Collected: 01/07/2026 09:33 Received: 01/07/2026 09:33

Table with 6 columns: Test Name, Result, Flag, Ref-Ranges, Units, Site. Row 1: Enhanced Liver Fibrosis (ELF) Score, 8.00, <9.80, QCRL

ELF score ranges and associated risk of disease progression (development of cirrhosis or liver-related events):

- < 9.80 Lower
> or = 9.80 - <11.30 Mid
> or = 11.30 Higher

In the Mid group, the risk of disease progression is similar to the pre-test risk. Pre-test risk refers to the likelihood of disease progression in the overall intended use population without considering the ELF score. Results should always be interpreted in conjunction with the patient's medical history, clinical presentation, and other findings.

ELF results > or = 7.7 may suggest the need for further specialized assessment, based on expert opinion, as noted in the AASLD 2023 NAFLD practice guidance figure 2 algorithm. Reference: Rinella ME et al. Hepatology. 2023;77:1797-1835.
